SUMMARY

I'm Murad Balazada, a dedicated React developer with 2 years of experience crafting dynamic user interfaces. I specialize in building robust admin panels and responsive designs, ensuring seamless functionality across all devices. With a keen understanding of the business side of front-end development, I focus on creating intuitive applications that align with strategic goals and drive efficiency. Constantly exploring the latest trends in web development, I strive to deliver innovative solutions that enhance user experience and empower businesses to succeed.

EDUCATION

Azerbaijan Technical University , Master Degree   **09.2024 - Present**
İnformation and Management in technical systems

Azerbaijan State Oil and İndustry University , Bachelor Degree   **09.2020 - 06.2024**
Processing Automation Engineering

Evo Academy   **12.2023 - 06.2024**
Front-end Development

WORK EXPERIENCE

React Developer (Hybrid) , CoffeeMe   **Aug 2024 - Present**

- In the CoffeeMe , I developed an admin panel and partner app, focusing on managing the interaction between coffee shop owners and customers. I utilized React with Redux Toolkit Query to efficiently handle API calls. My responsibilities included:
- Frontend architecture: Implemented dynamic UI components for managing products, orders, and user interactions.
- Real-time updates: Enabled real-time order and product updates, ensuring that coffee shop owners and customers always have up-to-date information.

Front-end Internship (Full-time) , Caspian Innovation Center (CIC)   **Feb 2024 - June 2024**

- During my tenure at Caspian Innovation Center, I actively contributed to the development of multiple high-impact projects, including a fully functional CRUD and request management system with React. Furthermore, as part of my responsibilities, I was involved in preparing web-based presentations for key projects at SOCAR, effectively communicating technical insights to stakeholders. My work emphasized performance optimization, modular component design, and adherence to industry best practices in modern web development.

Front-end Mentor, Evo Academy   **Aug 2024 - Nov 2024**

- As a Front-end mentor at EvoAcademy, I lead my students in the development of a real-world e-commerce website, guiding them through every stage of the project. I focus on teaching practical web development skills, covering essential technologies like React, Redux, and Node.js. Through hands-on experience, my students learn how to create dynamic, responsive, and user-friendly interfaces, manage state effectively, and integrate with backend systems.

SKILLS   Team Working   Excellent Communication   Analytical thinking

- HTML
- CSS
- Javascript
- Typescript
- React
- React Query

- Node.js
- Express.js
- ChakraUI
- Bootstrap
- Tailwind
- SASS (SCSS)

- Redux
- Redux Toolkit Query
- MongoDB
- Recoil
- Postman
- Github

- Git
- Socket.io
- Figma
- Restful APİ
- Notion
- MaterialUI

LANGUAGES AND CERTIFICATIONS

- **Languages:** Azerbaijan (Native), English (Intermediate) , Turkish (Upper Indermediate).
- **Certifications:**
- Front-end Developer Certificate - Caspian Innovation Center
- Front-end Developer Certificate - Algorithmics
- Front-end Developer Certificate - Evo Academy

PROJECTS

coffeeme.app
- In the CoffeeMe , I developed an admin panel and partner app, focusing on managing the interaction between coffee shop owners and customers. I utilized React with Redux Toolkit and created efficient, declarative API calls that minimized boilerplate code while handling asynchronous data fetching. This not only optimized the application's performance but also reduced potential errors in data handling.

bantik.az
- Bantik.az is a modern e-commerce platform that combines a sleek, responsive design with smooth animations to deliver an outstanding user experience. In this project, I focused solely on the front-end development, crafting an engaging interface for both the public site and the client admin system. Additionally, I developed the front-end components for the admin panel, enabling efficient management of a vast catalog of 12,000 products integrated via 1C.

evoacademy.az
- I built the EvoAcademy website using React and Tailwind CSS to deliver a dynamic and interactive user experience. In addition to creating a visually engaging front-end, I developed a comprehensive admin panel that empowers the client to manage the platform efficiently. The admin panel allows for seamless control over teacher profiles, course listings and pricing, as well as the addition of blog content, streamlining content management and updates. The website's design is exclusively my own.
